

<b>Универзитет у Нишу</b> <b>Медицински факултет</b>	<b>СТУДИЈСКИ ПРОГРАМ:</b> <b>ИНТЕГРИСАНЕ АКАДЕМСКЕ СТУДИЈЕ</b> <b>МЕДИЦИНА</b> <b>Акредитација 2018</b>																																			
<b>Назив предмета: Енглески језик у медицини</b>																																				
<b>Руководилац предмета:</b> Доц. др Наташа Милосављевић																																				
<b>Статус предмета:</b> обавезни																																				
<b>Семестар:</b> трећи, четврти <b>Година студија:</b> друга																																				
<b>Број ЕСПБ:</b> 3 <b>Шифра предмета:</b> M-II-11																																				
<b>Циљ предмета:</b>																																				
Циљ предмета је да студентима представи начин на који се енглески језик користи у медицинском и академском окружењу и да се студенти оспособе за усмену и писану комуникацију у професионалном и академском окружењу. Праћење савремених достигнућа у медицини је у основи професионалног развоја будућих лекара.																																				
<b>Исход предмета: (знања, вештине, ставови)</b>																																				
Студенти се оспособљавају за употребу енглеског језика у академској и професионалној комуникацији и у разговору с пациентима, колегама и осталим медицинским особљем. Након курса и положеног испита, од студената се очекује да стечено знање и вештине могу да примене и у писаној комуникацији, у виду писања научно-истраживачких радова и приказа случаја. Смештањем језика у одговарајући контекст и развијањем језичких вештина студенти ће моћи да самостално активно користе енглески језик медицине.																																				
<b>Број часова активне наставе: 60</b>																																				
<b>Предавања:</b> 60		<b>Вежбе:</b> 0																																		
<b>Садржај предмета</b>																																				
<b>Активна настава:</b>																																				
<table border="1"> <thead> <tr> <th style="text-align: left;"><b>1. Предавања</b></th> <th style="text-align: right;"><b>Број часова</b></th> </tr> </thead> <tbody> <tr><td>1. <b>1. Предавања</b>	<b>Број часова</b>																																			
1. Introducing the course <i>English for medicine</i> : aims and objectives	2																																			
2. Medical treatment Modal verbs, expressing possibility, probability and certainty Giving advice and instruction, explaining side effects	2																																			
3. Prevention, lifestyle, physical exercises, Maintaining blood pressure Reported speech	2																																			
4. Essential nutrients. Passive Voice. Information transfer.	2																																			
5. Medical history taking. The medical interview, physical examination. Conditional sentences.	2																																			
6. Health and disease. Classification of diseases. Conjunction, expressing similarities, differences and contrast.	2																																			
7. Illness examples. Disorders of the skeletal system: arthritis, osteoporosis, fractures. Exploiting case histories.	2																																			
8. Disorders of the muscular system: sprains and strains, ruptures, muscular dystrophy. Medical text, pre-reading, while-reading, post-reading. Contemporary medical journals.	2																																			
9. Disorders of the nervous system: stroke, meningitis in adults, schizophrenia. Vocabulary practice in context. Narratives.	2																																			
10. Disorders of the endocrine system: diabetes, hypervitaminosis, growth hormone deficiency. Clinical case: dialogue and discussion (patient background)	2																																			
11. Disorders of the cardiovascular system: congestive heart failure. Symptoms and signs. Discussing genetic, congenital and acquired disease.	2																																			
12. Disorders of the lymphatic system: swollen lymph nodes, Hodgkin lymphoma. Case study examples.	2																																			
13. Disorders of the respiratory system: upper respiratory infection, emphysema, bronchitis, asthma. Relationship between the immune system and the respiratory system disorders. Making a diagnosis. Discussing a diagnosis. Explaining a diagnosis.	2																																			
14. Mid-course review	2																																			
15. Progress Test	2																																			
16. Disorders of digestive system: peptic ulcer, gastritis. Signs of malnutrition.	2																																			

	Inadequate diet-food and health.	
17.	Disorders of urinary and reproductive system: urinary tract infection, kidney stones, cystitis, ectopic pregnancy, fibroids, cancer of the uterus Clinical cases (discussion and dialogue)	2
18.	Disorders of sense organs: hearing loss, conjunctivitis, cataract Interrelationship between systems. System review.	2
19.	Pain, pain example. Adjectives, intensifiers. SOCRATES	2
20.	The effect of stress on the body, sources of stress. IMRaD, controlled writing exercises	2
21.	Inflammation. Neoplasia: Classification and Nomenclature. Healing Presentation, poster presentation. Conference language.	2
22.	Drug therapy, sources of drugs, types of drug action. Group presentations. Project presentations. Case presentations.	2
23.	Drug therapy in skeletal system Medical documents: Admission details, case notes (history of illness)	2
24.	Drug therapy in muscular system Medical documents: Observation chart	2
25.	Drug therapy in nervous system Medical documents: Hospitalization report	2
26.	Drug therapy in endocrine system Medical documents: Laboratory request. Request for a specialist examination.	2
27.	Drug therapy in cardiovascular system Medical documents: Request for stationary treatment	2
28.	Drug therapy in respiratory system Medical documents: Clinical record	2
29.	Drug therapy in digestive system Medical documents: Discharge summary	2
30.	End of course review	2
<b>Укупно часова:</b>		<b>60</b>

- Raymond M. English Grammar in Use, Intermediate. Cambridge
- Oxford Latin Minidictionary

**Методе извођења наставе:**

- теоријска и практична настава
- проблемски оријентисана настава
- настава заснована на садржају и контексту
- консултације
- презентације
- симулације
- рад на пројекту
- рад у пару
- рад у малим групама

**Предмети које је студент обавезан да положи као услов за излазак на завршни испит:**

Нема услова

**Оцена знања: (максимални број поена 100)**

**Предиспитне обавезе**

- Активност у току наставе: 0 – 10 поена
- Презентација: 0 – 20 поена

**Завршни испит**

- Писмени испит / Усмени испит: 0 – 70 поена
